

Inclisafe VEXT

GENERAL INFORMATION

Digital sway meter. **Dynamic stability-analysis device for vehicles with rollover-risk warning.** Inclisafe considers the signals of several internal sensors which provide acceleration measurements, angular speed, slopes and other variables.

Using this information, together with the dimensions and inertia attributes of the vehicle, **such device estimates vehicle stability 10 times per second** through its own algorithms, which are quantified as a percentage of the maximum stability rate of the vehicle (100% stability means a stopped vehicle in horizontal position, 0% stability implies a potential risk of immediate rollover).

Based on the stability that is estimated at any moment, **the device provides (through a display) a warning and**

acoustical signal of increasing frequency according to the reduction in stability.

It is a universal device which can be adjusted for any type of vehicle. The system complies with the CE marking Directive 2004/108/CE on electromagnetic compatibility and the standards established in the NFPA 414/2012. EN 894-1, EN 61310-1-2, EN 61000-6-1, EN 61000-6-3.

The device is classified in the OTAN database under the number NSN 6605-332116466.
